

# Harsh Kumar

Delhi, Uttar Pradesh | +91 9560508400 | [harshhk512@gmail.com](mailto:harshhk512@gmail.com) | [in harsh-kumar-hk09/](https://www.linkedin.com/in/harsh-kumar-hk09/) | [gh harshhk512](https://github.com/harshhk512)

## EDUCATION

### Vellore Institute of Technology, Vellore | CGPA: 7.52

Sep 2022 – Jul 2026

– B. Tech in Computer Science & Engineering (Data Science)

Focus: Business Analysis, Data Analytics, Business Intelligence,

Problem Solving

## TECHNICAL & ANALYTICS SKILLS

**Languages & Tools:** Python, Java, SQL

**Analytics:** EDA, Predictive Modeling, Power BI, Excel, Statistical Analysis

**ML & Frameworks:** NumPy, TensorFlow, Keras, FastAPI

**Certifications** Hacker Rank Problem Solving (Basic) • Hacker Rank SQL (Gold)

## EXPERIENCE

### IT Innovation DX Intern | LG Electronics India Limited

Jun 2025 – Jul 2025

- Scoped and planned a full client-server monitoring architecture for LG's production floor — defining system requirements, database schema, and UI wireframes through stakeholder interviews and Moscow prioritization.
- System achieved ~70% reduction in manual IT effort and ~30% drop in downtime costs — with <200ms latency, 98% test success rate and zero critical failures across 20+ concurrent users post-deployment.

## PROJECTS

### WAFinity - Intelligent Web Defense

Sep 2025- present

Python, Flask, Machine Learning, FastAPI | [WAFinity---Infinite-Protection-Intelligent-Detection](#)

- Implemented a dual-layered detection engine combining signature-based filtering and real-time ML-driven behavior analysis, resulting in **<200 ms** request response time and **95%** threat detection precision in real-world simulated HTTP traffic.
- Trained ML model on HTTP traffic patterns to flag malicious requests in real time, achieving high-precision threat classification across known and previously unseen attack vectors.

### PC Health Dashboard - Extended Personal Build

Python, TensorFlow, FastAPI, HTML/CSS | [PC-Health-Dashboard-](#)

Jul 2025

- Built and deployed a real-time PC Health Dashboard monitoring CPU, memory, disk and application metrics across **3 production lines** — reducing manual IT monitoring effort by **~70%**.
- Achieved **98%** end-to-end test success rate with **<200ms** dashboard latency; system handled 20+ concurrent users with server memory under 300MB at peak load.

### Fake News Detection - NLP Classifier using BERT

August 2025

Pandas, NumPy, Matplotlib, Scikit-learn | Research Project

- Developed a binary text classification model using Bidirectional Encoder Representations from Transformers (**BERT**) to detect fake news articles, achieving **~92% classification accuracy** on a labeled dataset
- Fine-tuned a **pre-trained BERT model** using **Scikit-learn pipelines**, improving precision and recall for fake news detection and reducing misclassification by **~18%**.

## LEADERSHIP & EXTRACURRICULAR

### Team Coordinator | Aikya Cultural Fest - VIT

Feb 2023 - 2025

- Led end-to-end coordinator of one of VIT's largest cultural events across three consecutive editions, managing 1000+ attendees, a cross-functional teams, vendor logistics, and on-ground execution.

### Member | **ic-ETITE '24 BOLT 2.0 Hackathon** (IEEE Madras)

Feb 2024

- Was an integral part of the BOLT 2.0 Hackathon conducted in the IEEE Madras International Conference hackathon, collaborating on emerging tech engineering challenges under competitive constraints.
